

# WORLD EMERGENCY CARD

## Dear Doctors and Healthcare Professionals,

I would like to introduce you to **World Emergency Card (WEC)** – a revolutionary solution that connects patients, healthcare professionals, and emergency responders across continents. Our mission is to ensure **fast and accurate medical care anytime, anywhere.**

### What does WEC offer users?

WEC provides patients with a **digital medical card**, granting instant access to their **essential health information** – allergies, chronic conditions, blood type, medications, emergency contacts, and treating physicians. All this is securely stored and accessible from anywhere in the world.

Our clients come from **over 64 countries**, primarily:

- ✓ **Tourists** – travelers who may require medical assistance in a foreign healthcare system
- ✓ **Chronically ill patients** – individuals with diabetes, cardiovascular diseases, or other conditions
- ✓ **Pregnant women** – requiring quick and easy access to their medical records

### Added Value for Doctors

As healthcare professionals, you often encounter patients with incomplete medical documentation or those who do not speak the local language. **WEC helps you:**

- ✓ Instantly access critical medical information without complex communication
- ✓ Minimize the risk of misdiagnosis and treatment errors
- ✓ Respond quickly in emergencies, such as allergic reactions or accidents
- ✓ Facilitate international cooperation between healthcare providers in different countries

### Our Mission

WEC is more than just a **digital medical card** – it is a **global initiative** that improves access to healthcare across borders. We believe that everyone should be able to travel safely and receive **fast, accurate, and high-quality medical assistance** in case of an emergency, regardless of their location.

If you are interested in learning more about **WEC**, I would be happy to provide further details on implementation and collaboration opportunities.

Marek Lupieński  
CEO & Founder – World Emergency Card
